FORM TP 2016140

MAY/JUNE 2016

CARIBBEAN EXAMINATIONS COUNCIL

CARIBBEAN ADVANCED PROFICIENCY EXAMINATION®

APPLIED MATHEMATICS

STATISTICAL ANALYSIS

UNIT 1 – Paper 032

1 hour 30 minutes

READ THE FOLLOWING INSTRUCTIONS CAREFULLY.

- 1. This paper consists of THREE sections. Answer ALL questions from the THREE sections.
- 2. Write your answers in the spaces provided in this booklet.
- 3. Do NOT write in the margins.
- 4. Unless otherwise stated in the question, all numerical answers MUST be given exactly OR to three significant figures as appropriate.
- 5. If you need to rewrite any answer and there is not enough space to do so on the original page, you must use the extra page(s) provided at the back of this booklet. **Remember to draw a line through your original answer**.
- 6. If you use the extra page(s) you MUST write the question number clearly in the box provided at the top of the extra page(s) and, where relevant, include the question part beside the answer.

Examination Materials:

Mathematical formulae and tables (Revised 2010) Electronic calculator Ruler and graph paper

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.

Answer ALL questions.

e which of the following cases will constitute a sample and which will constitute a ulation:		(a)	1.
The 40 buses owned by "I'll take you there tours"	(i)		
[1 mark]			
40 of the persons who attended the health seminar last week	(ii)		
[1 mark]			
manufacturer of certain line of beauty product wants to investigate the age of persons o use the product. To obtain this information, a random sample of the persons who use product will be required.	who us	(b)	
For EACH of the following sampling methods, state ONE reason why the method may be unsatisfactory.	(i)		
a) Visit various beauty shops on Saturday morning and interview a selection of persons who buy the product.			
[1 mark]			
b) Post a questionnaire on the manufacturer's Facebook page and ask page fans or followers to respond.			
[1 mark]			

(ii)	boo	manufacturer sets up a sampling booth at an exhibition. As persons visit the th, their names and other related information are taken. For EACH of the owing activity, describe the sampling method that is used.
	a)	At the end of the exhibition, all the names are put into a box, and then a random sample of 50 names is taken from the box.
		[1 mark]
	b)	Every fifth name is taken from the list of names collected over the three days of the exhibition.
		[1 mark]
samp		students in the third year group at a school, 60 are boys. Stratified random as used to select a sample of 15 students from the group. How many boys will mple?

		[3 marks]
(vi)	Calculate the interquartile range for the data.	
		[2 marks]
(v)	Determine the median waiting time for the sample.	

Total 20 marks

2.	(a)	except	contains three red markers, three blue markers and four black markers, all identical for colour. A marker is taken from the bag, its colour noted and the marker returned bag. This is done three times. Calculate the probability that
		(i)	all three markers are red
			[2 marks]
		(ii)	two of the markers are black.
			[4 marks]
	(b)		me that a customer takes to complete a transaction in the business line at the bank is a normal distribution with a mean of 5.4 minutes and a standard deviation of 1.7 es.
		(i)	What is the probability that a customer selected at random will spend more than 8 minutes to complete a transaction?
			[4 marks]

(11)	Below how many minutes will 80% of the customers spend in completing a transaction?
	[4 marks]
	ket research has shown that in a certain district only 55% of the households have net access.
(i)	In a random sample of 10 households, what is the probability that exactly 6 households have internet access?
	[4 marks]
(ii)	In a random sample of 80 households, how many will be expected to have interne access?
	[2 marks]
	Total 20 marks

3.	(a)	A random with mea

	(b)	The relati	of stem									
		X	4	5	6	9	14	15	15	19	21	22
		y	0.75	1.20	0.55	0.60	0.65	0.55	0	0.35	0.45	0.40
		Summary (i) D	$y: \sum x = 0$					_		_		

[5 marks]

(ii) Use your regression line to estimate the width of the stem when the stem density is 8.

[2 marks]

		[2 marks]
(111)	to the data.	ue as it relate.
(iii)	The correlation coefficient for this data is -0.63 . Interpret this val	ue as it relate

(c) Persons who visited the restroom of a certain fast-food outlet were asked to state their opinion of the quality of the restroom facilities. The following table shows the responses from a sample of 100 persons.

		Gender of R	Respondents	Totals
		Male	Female	Totals
	Above average	8	7	15
Quality of Facilities	Average	26	24	50
Facilities	Below average	7	28	35
	Totals	41	59	100

A χ^2 test is carried out to determine whether there is an association between the gender of persons and their opinion.

(i)	State appropriate null and alternate hypotheses.						
	[2 marks						
ii)	Determine the critical region of the test at the 5% level of significance.						
	[2 marks						

(iii)	Wha	t is the expected value corresponding to the value "24" (row 2, column 2)?
	•••••	
	•••••	
	•••••	[2 marks]
(iv)	The	calculated test value is $\chi^2 = 9.825$.
	a)	Will you accept or reject your null hypothesis?
		[1 mark]
	b)	Interpret your decision.
		[1 mark]
		Total 20 marks

END OF TEST

IF YOU FINISH BEFORE TIME IS CALLED, CHECK YOUR WORK ON THIS TEST.
